

Appendix B, Table 2. Nucleoside Reverse Transcriptase Inhibitor-Based, Fixed-Dose Combination Tablets for Use as Part of an Antiretroviral Regimen (Last updated December 2019; last reviewed June 3, 2021) (Page 1 of 1)

The following table includes dose recommendations for Food and Drug Administration–approved, dual nucleoside reverse transcriptase inhibitor (NRTI) fixed-dose combination (FDC) products. These FDC tablets are not complete regimens and must be administered in combination with other antiretroviral (ARV) drugs. **FDC products that contain zidovudine (ZDV) have been removed from this table. Please refer to the FDA product labels for information regarding ZDV-containing FDCs.**

Please see the class-specific drug characteristics tables (Appendix B, Tables 3, 4, 5, and 6) for details about the individual drugs contained in these FDC products, including information on elimination and metabolic pathways, serum and intracellular half-lives, and adverse effects. The FDC tablets in this table are listed by trade name.
